Bookshop Management System

[Code No: BIT 179 CO]

A Project submitted in partial fulfillment of the requirement for Degree of
Bachelors of Information and Technology (BIT)

Supervisor

Department of Information Technology

Department of Science & Technology
Aryan School of Engineering and Management
Mid-Baneshwor, Kathmandu

ABSTRACT

Bookshop Management System is a project which is used to find books available in the book shop or store. When a customer comes to the bookshop or store and asks for the book, he/she wants, with the help of this system and you (Bookkeeper) can easily find the book according to the customer. A customer is required to give title name of the book he/she wants. After entering the data given by the customer, the system will tell you (Bookkeeper) whether the book is available in the store or not.

Keywords:

Bookkeeper: a person who keeps as well as sells book to the customers.

ACKNOWLEDGEMENT

We express our profound gratitude and indebtedness to our project supervisor sir, who directed us from time to time with valuable guidance, constant encouragement, and suggestions throughout the project. Without the help of your guide this project would never have been realized.

We would like to express our sincere thanks to mam for giving us this opportunity to undertake this project.

Last but not least, we would like to express our sincere thanks to all our friends and others who helped us directly or indirectly during this project work

CHAPTER 1: INTRODUCTION

1.1 Background

Bookshop Management System is a system which can be used in bookshop or bookstore. Bookshop Management System is a system designed to store details of books in bookshop or bookstore. Bookshop Management System is a system which maintains inventory of books in a bookshop or bookstore. It will make you easy to find books with its title, writer, publisher and price. [1]

1.2 Problem statements

As people come in bookshop, finding books will be hard for shopkeeper. Finding books fast will not be easy for shopkeeper. Only some bookshops have this system whereas others don't. [2]

Major problems we find in bookshops or bookstore are:

- Books in the bookshops or bookstore are not arranged properly.
- Bookkeeper does not know whether the book ordered by the customer is available in the store or not until they check the whole store.

1.3 Objectives

Main objectives of our project are:

- I. To save bookkeepers time and energy to search books.
- II. To run bookshop in systematic way.

1.4 Applications

This project is made to make bookshops much better than past. This project is or will be applicable in every bookshop or store.

1.5 Project features

Prime features of this project include:

- File: Use of file handling to keep track of all the book records in a file.

1.6 Feasibility Analysis

1.6.1 Economic Feasibility

This system is not costly as other systems. This system will save time as well as salary for employees because this system will make searching books easy. So, less employees will be required in bookshop.

1.6.2 Technical Feasibility

This system is technically feasible in several ways. It is developed by using a number of readily available object oriented programming in C++. This system is made use of Dev-C++.exe application

1.6.3 Operational Feasibility

Operational feasibility evaluates whether a system is relevant to operate in a particular environment. Bookshop Management System presents a small number of features making it operationally feasible. This system is easy to use. To use this system the person must have little knowledge about object oriented programming in C++.

1.7 System Requirement

1.7.1 Software Requirement

For the program to be run, the set of following software must be prepared with the following specification:

- Microsoft-Disk Operating system, Windows 8, Windows 10 etc.
- Dev-C++.exe application

1.7.2 Hardware Requirement

For this program to be run, the computer hardware must be prepared with the following specifications:

- 32 MB RAM (minimum)
- Pentium series (minimum)
- 100 MB Hard Drive Space (minimum)

CHAPTER 2: LITERATURE REVIEW

Most of the books are searched manually in Nepal. Before, bookkeepers had to search manually in his/her store or shop and customer has to wait for more minutes because the bookkeeper cannot remember where he/she kept the book, the customer wanted, in the his/her store or shop. After the searching the whole store manually and bookkeeper cannot find the book, more time has been wasted for both bookkeeper as well as for the customer. after not finding the book customer had to give the information about the book, he/she wanted and bookkeeper had to write it manually in a paper and customer had to wait for 1-2 days so that the bookkeeper can bring the book in the shop or store that customer ordered. [3]

So, our system becomes useful in the bookstore or shop as it saves time a lot. Bookkeeper will able to bring books in time for the shop or store. Our system will be freely available to the bookshops or store. [4]

CHAPTER 3: METHODOLOGY

The program has following options to enter:

- Add Book
- Edit Book
- List Books
- Search Book
- Buy Book
- Exit

3.1 System Block Diagram

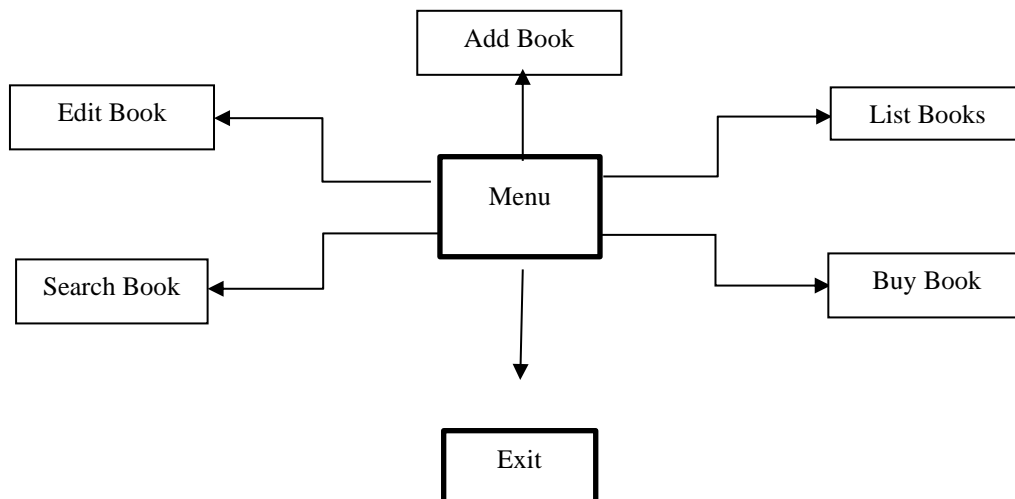

Figure 3.1 System Block Diagram

3.2 Algorithm

Step 1: Start

Step 2: Prompt and Read Username and Password

Step 3: Display available options

Step 4: Display Menu Options

Step 5: switch (menu choice)

Step 6: if choice = A

Step 7: read author_name, book_title, book_publisher,
 book_stock, book_price

Step 8: store author_name, book_title, book_publisher
 book_stock , book_price in data file

Step 9: else if choice = D

Step 10: read character from data file

Step 11: print character

Step 12: else if choice = E

Step 13: read book_title

Step 14: read new_author_name, new_book_title,
 new_book_publisher, new_book_stock,
 new_book_price

Step 15: else if choice = S

Step 16: read book_title to search

Step 17: if book_title = bookdata_in_file

Step 18: display “Book details”

Step 19: else

Step 20: display “Book not found”

Step 21: else if choice = B

Step 22: read author_name, book_title, book_price

Step 23: Display options

Step 24: switch(option)

Step 25: if choice = 1

Running Head: Bookshop Management System

Step 26: buy book
Step 27: else if choice = 2
Step 28: display total amount
Step 29: else if choice = X
Step 30: go to End
Step 31: else
Step 31: End

3.3 Flowchart

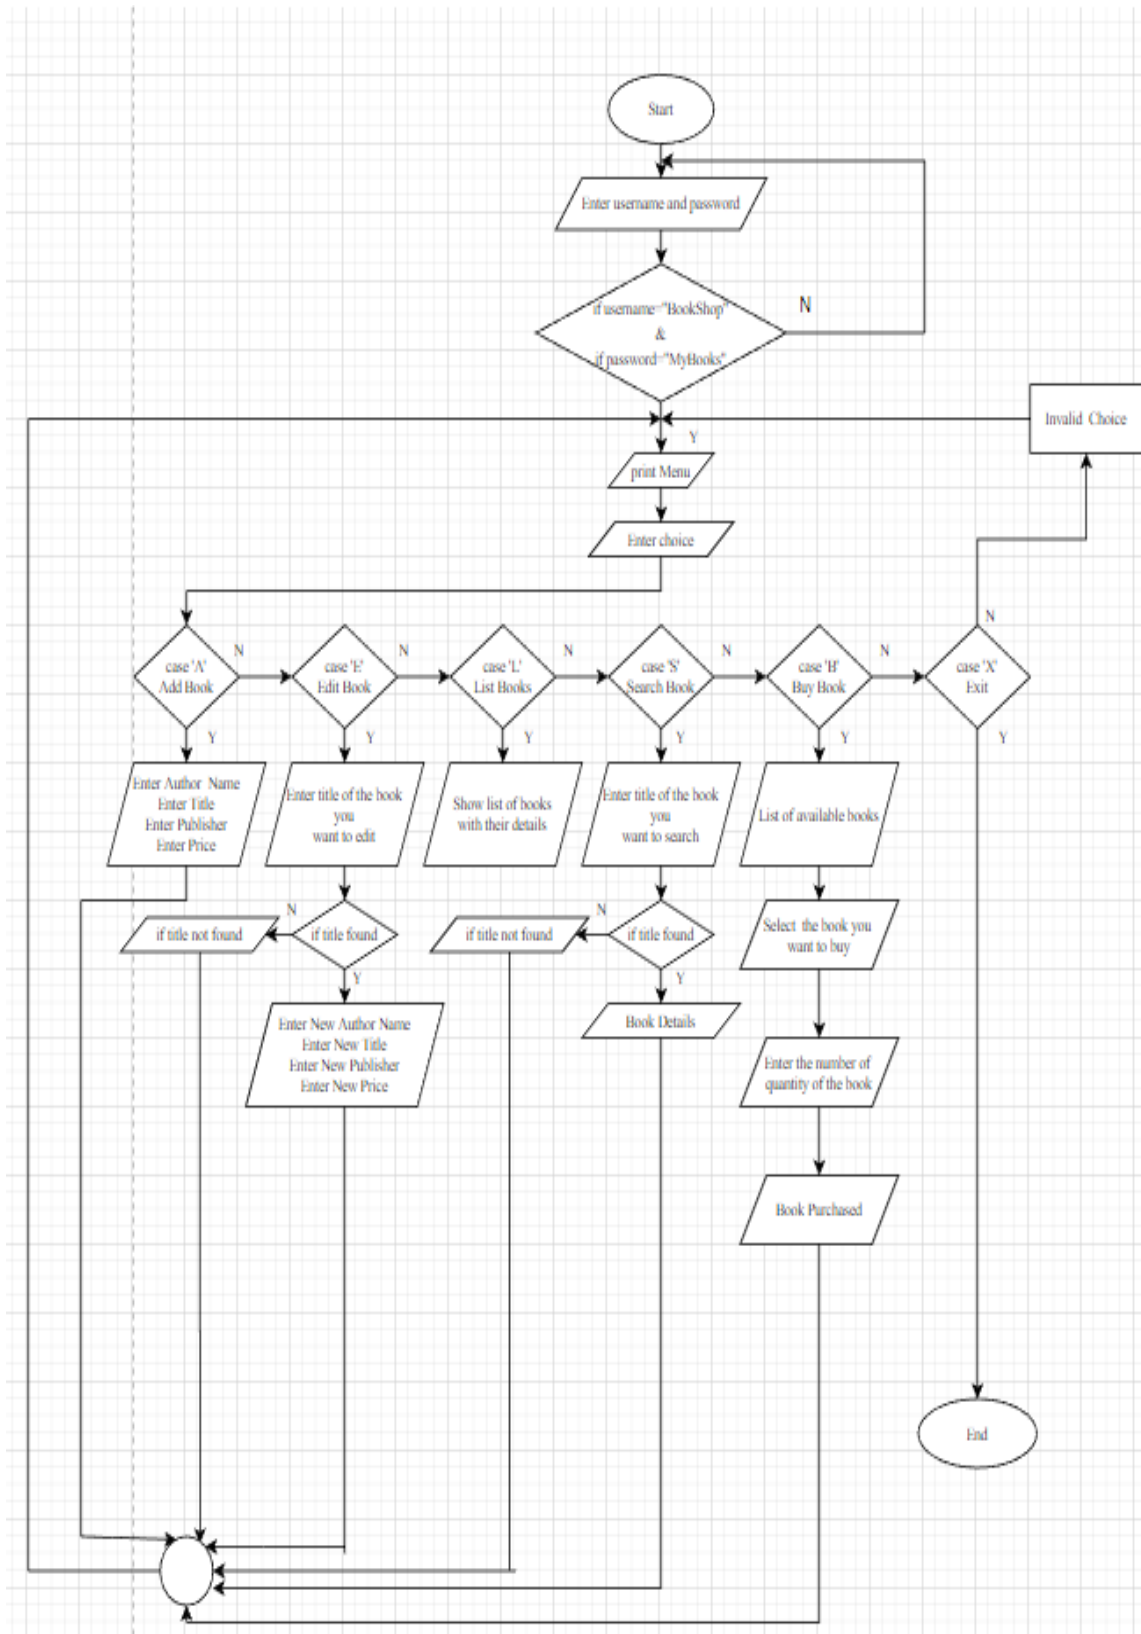

Figure 3.3 Flowchart for bookshop inventory system

CHAPTER 4: RESULT AND DISCUSSION

4.1 Output

```
-----  
-  
-          MENU  
-      A   Add Book  
-      E   Edit Book  
-      L   List Books  
-      S   Search Book  
-      B   Buy Book  
-      X   Exit  
-----  
Choose any option from above:
```

CHAPTER 5: CONCLUSION AND FUTURE ENCHANCEMENT

5.1 Conclusion

In conclusion, we can see that the system that we developed will bring a lot of benefits for bookkeepers. Books can be easily be found in the store or bookshops. By using this system, it will be more efficient and effective for the bookkeepers since the process of finding book and about its information becomes faster and easier. All the data and information recorded into the system will be save and easy access only for the bookkeepers. In addition, it is easy for the bookkeepers to do their work. Finally, it will lead to a better and comfortable environment for the user (owner of the shop).

5.2 Future Enhancement

- We can make it further more useful by making this system online.
- We can make it available for library as well.
